

AVENGER

"Born on the Bayou of Louisiana, Raised in the lowcountry of South Carolina"

Avenger is a low profile bay boat originally built in Louisiana in the 1980's that is being proudly reintroduced by Carolina Composites in Walterboro, S.C. The Avenger has been a popular name in south Louisiana for almost forty years, and some of the original hulls are still being used by guides fishing out of Venice Marina. Carolina Composites has researched why guides in the Venice area were so enamored with the hull design and retooled the boat, modernizing the hull design and adding an offset transom setback which opens up the back deck for more fishing room, allows for flotation to be added to the setback, and helps performance by refusing to allow the boat to 'squat' like some shallow running bay boats with big engines tend to do. They also increased the size of the storage boxes and added style and curb appeal. The boat crosses over what guides in the Louisiana area, and for that matter all over the east coast, demand in a fishing platform that offers the simplicity of a fishing machine in combination with a boat that can appeal to the weekend fisherman and even his family when cruising is the order of the day.

**"BUILT WITH THE
SERIOUS FISHERMAN
IN MIND"**

AV26

In a word, the Carolina Composites story is about family. Roy McSwain and Mike Holmes are brothers and co-owners of the company. Their family has a long history in the boat building business, and they both grew up learning the art of manufacturing products made of fiberglass from family. They both went to work for uncles who were both building boat companies. These companies were relatively small manufacturers in the late eighties and nineties, but both companies have become major brands in the business in the twenty plus years since. Roy and Mike worked their way into being important parts of both companies. When they decided in 1999 to "do their own thing", they started by manufacturing parts for other boat companies. Items like lids, consoles, and boxes were subcontracted to Roy and Mike to speed the process at the growing companies of family as well as other boat builders. They manufactured golf cart bodies as well... anything and everything fiberglass. Eventually they realized that the only path to long term success was to "build their own better mousetrap" as Roy puts it. So while tooling parts for other manufacturers during the day, Mike and Roy went to work on designing a boat after hours. That boat became the first boat in the Pioneer line. The brothers took the boat to the Charleston Boat Show in 2003 and came home with twenty orders. Roy and Mike have turned those twenty orders into a growing company with three boat lines. Sister Amanda was in charge of quality control in the factory for ten years and now has started her own company in the same facility producing upholstery products and seating for all three lines. Roy and Mike's mom works at the plant as well. Nearly one hundred employees are the extended family. The care and pride that Roy and Mike put into that first seventeen foot boat has now been passed down to every employee in our factory. We DO NOT do things the fast way, the easy way. They took what they had learned and did what came naturally... built a boat they were proud of. Many of our manufacturing processes take longer, cost more, and are not assembly line friendly. When you buy a Carolina Composites boat, you are buying a hand crafted well designed product you can keep, enjoy, and be proud of for a lifetime. Welcome to the family...the Carolina Composites family. Expect to be treated that way throughout the entire boat buying process. It's about family pride here at Carolina Composites, and it shows in the product and the people.
